

YOUR DREAM IS OURS TOO

If none of these match your vision, let us know and we'll ensure you have it. We can match colours that are not on our charts to help your dream project materialize. Our team has the ability to offer a wide range of colours through colour customisation service.

Next & Beyond.

GENERAL INFORMATION

The fluorocarbon (PVDF) coating is applied to the aluminium coil prior to lamination onto ALUCOBOND®, using a continuous coil coating process. The multiple layers are individually cured at temperatures between 200 - 260°C. The quality of the coating is tested according to standards established by E.C.C.A. (European Coil Coating Association) of which 3A Composites is a member. Fluorocarbon (PVDF) coating systems combine good formability and excellent surface durability. They are extremely resistant against weathering, strong solar radiation and pollution.

The colour reproduction in this chart is subject to printing limitation. For exact colour matching, request for actual colour samples. The standard gloss for colours is between 30%- 40% according to the Gardner Scale.

Minimum order quantities apply. For more information and product specification please refer to your nearest ALUCOBOND® representative.
