ALUCOBOND®

CONCRETE

Timeless face of contemporary beauty.

LET THE CONTEMPORARY BEAUTY TAKE OVER.

Concrete is one of the most durable manmade materials used in construction today. With its bare look, concrete is a preferred choice of many designers who expect to add contemporary touch to their projects.

Compared to real concrete, ALUCOBOND® concrete, an aluminium composite material, offers numerous benefits when it comes to cladding. It not only acts as a building envelop for protection but it's thin, lightweight, rigid yet highly formable nature also provides limitless design possibilities. ALUCOBOND® concrete's high versatility enables the creation of complex 3D shapes and geometric patterns with ease.

ALUCOBOND® concrete can be used for a range of applications such as facade cladding, interiors, decorative highlighter walls, balconies and column cladding.

ALUCOBOND® concrete is designed to demonstrate a high level of sustainability in the life cycle of the material. The aluminium composite material is made of fully recyclable material and all these attributes make ALUCOBOND® concrete an ideal choice for cladding.

*This is representative of the entire pattern of the panel.

We have roughed it out to bring you some of the most breathtaking contemporary concrete shades that will truly embellish your creations.
